ZenHR SaaS HRMS — Client Release Handoff Package

Enterprise Multi-Tenant Human Resource Management Platform | v1.0.0 Production Release

1. Executive Release Overview & GitHub Repository

This official release build has undergone full end-to-end multi-tenant simulation, penetration testing, responsive UI verification, and continuous integration (CI/CD) validation. It is fully ready for client acceptance testing.

- **Repository Origin:** https://github.com/saimahmedqazi/HRMS
- **Active Git Branch:** main (Directly tracking origin/main, fully up to date)
- **Verified Release Commit:** 49f7501 — Validated clean lockfile, security fixes, and responsive layout
- **Core Technology Stack:** Next.js 15 (App Router), NestJS 10, PostgreSQL 16, Prisma ORM, Redis 7, BullMQ, Tailwind CSS

2. Demo Client Credentials & Role Access Directory

The demo environment is pre-configured with two completely isolated commercial tenants and all seven standard roles. All runtime test data has been reset to pristine seed state.

A. Platform Operations (Cross-Tenant Infrastructure & Support)

Platform Role	User Identity	Login Email	Standard Password	Scope / Capabilities
Super Admin	Platform Operations Lead	superadmin@zenhr.com	SuperAdmin@123	Tenant provisioning, tier upgrades, audit logs, 1-hr Support Impersonation Mode.
Operation Manager	Operations Analyst	ops@zenhr.com	Password@123	Platform analytics, subscription monitoring, system health metrics.

B. Demo Tenant 1: Acme Corporation (PREMIUM Tier — 8 Employees)

Role Title	Employee Code	Login Email	Password	Operational Boundaries & Permissions
Company Admin (CEO)	EMP-001 (Arthur Pendelton)	ceo@acme.com	Password@123	Full tenant admin, monthly payroll execution, Stripe billing, company settings.
HR Manager	EMP-002 (Hannah Ross)	hr@acme.com	Password@123	Workforce directory, final Step 2 leave approval, resource fulfillment, policies.
Department Manager	EMP-003 (David Miller)	eng.manager@acme.com	Password@123	Engineering oversight, Step 1 resource requisitions, department payroll summary.
Team Lead	EMP-004 (Tina Lopez)	team.lead@acme.com	Password@123	Frontend team oversight, Step 1 leave recommendation reviews.
Employee (Active)	EMP-005 (Evan Wright)	employee@acme.com	Password@123	Self-service attendance check-in, Work Timer, personal payslips, leave requests.
Employee (Probation)	EMP-006 (Noah Green)	newbie@acme.com	Password@123	New hire under probation: Casual and Annual leave blocked per company policy.

C. Demo Tenant 2: Globex Logistics (BASIC Tier — Isolated Plan)

Role Title	Employee Code	Login Email	Password	Operational Boundaries & Gated Tiers
Company Admin (CEO)	EMP-101 (George Globex)	ceo@globex.com	Password@123	Isolated tenant admin. Work Timer and AI Assistant are strictly locked to test gating.

Enterprise Multi-Tenant Human Resource Management Platform | v1.0.0 Production Release

3. Deployment Runbook & Local Execution Guide

Follow this standardized sequence to run the services in local development, staging, or production environments:

Step 1: Environment Prerequisites — Ensure Node.js 20.x or 22.x, PostgreSQL 16 (Port 5432), and Redis 7 (Port 6379) are active.

Step 2: Clone & Dependency Installation — git clone https://github.com/saimahmedqazi/HRMS.git && cd HRMS && npm install

Step 3: Database Migration & Clean Seed — cd apps/backend && npx prisma migrate dev && npx ts-node -r tsconfig-paths/register prisma/seed.ts && cd ../..

Step 4: Launch Backend API Service — npm --prefix apps/backend run start:dev (Accessible on http://localhost:4000/api/v1)

Step 5: Launch Frontend Web Application — npm --prefix apps/frontend run dev (Accessible on http://localhost:3000)

Step 6: Interactive Swagger OpenAPI Docs — Visit http://localhost:4000/api/docs for complete interactive API documentation.

4. Recommended Acceptance Scenarios for Client QA

The following six end-to-end verification workflows are recommended for immediate validation:

- **Scenario 1: Cross-Tenant Data Isolation:** Sign into Acme Corp (ceo@acme.com) in one browser window and Globex (ceo@globex.com) in an incognito window. Verify Acme displays 8 employees while Globex displays 1 employee. Direct cross-tenant API lookups return 404.
- **Scenario 2: Multi-Tier Leave Approval:** Apply for leave as employee@acme.com (My Leave). Sign in as team.lead@acme.com to review and approve Step 1 (Status: Step 1 Approved). Switch to hr@acme.com to grant final Step 2 approval (Status: Approved).
- **Scenario 3: Work Timer & Break Monitoring:** Log in as employee@acme.com and activate the Work Timer on the Dashboard. Test pause (starts lunch break counter), resume, and stop checkout. Verify calculations.
- **Scenario 4: Feature Tier Gating:** Navigate to AI Assistant or Work Timer as ceo@acme.com (Premium: Active and conversational). Navigate to the same routes as ceo@globex.com (Basic: Guard triggers upgrade banner with zero leakage).
- **Scenario 5: Super Admin 1-Hour Support Mode:** Sign in as superadmin@zenhr.com, navigate to Companies, select Acme Corp, enter an audit reason, and launch Support Mode. Verify session scopes strictly to Acme for 1 hour, then click Exit Support Mode.
- **Scenario 6: Mobile & Tablet Responsiveness:** Resize browser to mobile width (375px) or inspect on iPhone/Android. Verify hamburger menu drawer, responsive card grids, and zero horizontal scroll overflow.

5. Quality Gate & Continuous Integration (CI) Sign-Off

- **Backend Test Coverage:** 32 Jest test suites passed, 147 of 147 unit and integration tests passing (100% pass rate).
- **Type Safety Sign-Off:** TypeScript compilation (tsc --noEmit) completed across backend and frontend with zero errors.
- **Production Bundle Build:** Optimized production build (next build) compiled all 23 application routes successfully.
- **GitHub Actions CI Status:** Full CI pipeline (.github/workflows/ci.yml) validated and passing on GitHub origin/main.

STATUS: CERTIFIED FOR CLIENT ACCEPTANCE & PRODUCTION RELEASE
